

Army Whitelist Registration

What is Army Whitelist Registration?

To ensure only properly configured web servers are allowed to connect from DoD networks to the commercial internet, USCYBERCOM maintains a list of all websites on the NIPRnet requiring connection to the commercial internet. Internet-facing websites registered on this "whitelist" were previously listed in a database called A&VTR. The A&VTR database was replaced by a new database called the Army Registry of Networks and Layer-3 Devices (ARNLD).

Registration Deadline: 30 Nov 2010

USCYBERCOM Communications Tasking Order (CTO) 10-079 requires units to register their internet-facing websites in the ARNLD database not later than 30 November 2010. Any sites not properly registered on the ARNLD database by this date will be unable to connect to the NIPRnet.

What actions are required?

Army Commands, Army Service Component Commands, Direct Reporting Units and their subordinate organizations who operate NIPRnet websites should review the ARNLD database. Access the ARNLD website at <https://www.us.army.mil/suite/page/600053>, and verify your requirements are completely and correctly reflected.

Information previously submitted to the A&VTR database was not automatically transferred to the ARNLD database, so new System Registration Module (SRM) requests are required for all NIPRnet connection requirements. It is the responsibility of the website owner to submit registration requests for their websites even if the web server equipment is administered by the local Network Enterprise Center (NEC) or another web host provider.

7th Signal Command can assist

On 7 October, 7th Signal Command Operations Center sent detailed information about the USCYBERCOM order to ACOM, ASCC, and DRU CIO/G6 POCs, so they should already be aware and working towards compliance. As the deadline approaches, 7th Signal Command NECs can provide technical assistance in completing SRM Requests. For more information or assistance, contact the 7th Signal Command Operations Center, (706) 787-7858.
